SAMPLING AND OVERVIEW

The survey was planned by the Civil Service Bureau of the Hong Kong Special Administrative Region Government and undertaken by the PolyU Technology Consultancy Co. Ltd., with the aim of gauging public views on the services provided by civil servants. Altogether 1 220 respondents aged 18 or above were successfully interviewed by telephone between 5 and 9 October 2002.

The following sampling method was used. Based on the appropriate ratio, a total of 2 590 telephone numbers were randomly picked as samples from the latest residential telephone directories (English editions) of Hong Kong Island, Kowloon and the New Territories. After contact was successfully made, the “Kish Grid” method was used to choose randomly a member of the household aged 18 or above as the interviewee. A breakdown of the samples is given below.

(1) Telephone numbers sampled		2 590
(2) Unusable numbers		482
(a) Invalid numbers	377	
(b) Non-residential numbers	22	
(c) Fax numbers	72	
(d) No suitable interviewee	11	
(3) Usable residential numbers		2 108
(a) Interviews successful	1 220	
(b) Interviews unsuccessful	888	
(i) Hung up halfway	18	
(ii) Failure to get through	474	
-- Call unanswered	359	
-- Line busy	28	
-- Target interviewee not available	45	
-- Answered by message recorder	42	
(iii) Refused to give interview	390	
(iv) Interview aborted due to language barrier	6	

Response rate = $3(a)/(3(a)+3(b))*100\% = 57.9\%$
